# SYLLABUS

## CONCEPTS OF BIOCHEMISTRY

### Course objectives

- Describe the process of carbohydrate digestion, absorption and functions of carbohydrates in the body.
- State the composition and describe the structure of amino acids.
- describe the structure of a nucleotide as being a phosphate group, pentose sugar (either ribose or deoxyribose), and a nitrogen containing base,
- recall that the nitrogenous bases are adenine, cytosine, guanine, and thymine in DNA, or uracil in RNA, and the base pairings that occur,
- state that a nucleic acid is formed from many nucleotides, joined by condensation reactions,
- compare and contrast the structures of DNA and RNA,
- explain the importance of DNA in storing genetic material and safely transferring genetic information between organisms.

### Unit 1

Monosaccharides - structure of aldoses and ketoses, ring structure of sugars, conformations of sugars, mutarotation, anomers, epimers and enantiomers, structure of biologically important sugar derivatives, oxidation of sugars. Formation of disaccharides, reducing and non-reducing disaccharides. Polysaccharides – homo- and heteropolysaccharides, structural and storage polysaccharides. Structure and role of proteoglycans, glycoproteins and glycolipids (gangliosides and lipopolysaccharides). (definition, structure, functions, examples only) Carbohydrates as informational molecules, working with carbohydrates (applications of carbohydrate) .

### Unit 2

Amino acids: Definition, classification & structures. Physico-chemical properties of amino acids(amphoteric molecules, ionisation, zwitterions, pk values, isoelectric point, Lambert-Beer's law, optical density, absorption spectra), titration of amino acids (glycine, glutamic acid, lysine, histidine), Formol titration of glycine (only reaction and principle), reaction of amino acids: reaction due to amino groups(reaction with mineral acids,alkyl halides, acetyl

## PHYSICS OF ENGINEERING MATERIALS

### UNIT: I ELASTIC MATERIALS

(10hours)

1. Explain elasticity and plasticity. Give some examples for good elastic materials. Mention the importance (Engineering) of elastic materials. concept of stress and strain. Discuss two types of stresses namely tensile stress and compressive stress. Briefly discuss the effect of stress, temperature, annealing and impurities on elasticity
2. Strain hardening and softening: just explain what is strain hardening (strengthening of material by plastic deformation) and hardening co efficient and softening. No detailed discussion of processes.
3. State and explain Hookes' law, stress strain curve, elastic and plastic limits. Elastic modulus, define three different elastic moduli.
4. Define lateral strain and linear strain and hence Poisson's ratio  $\sigma=\beta/\alpha$  ( $\alpha$ = linear strain coefficient) and ( $\beta$ = lateral strain coefficient) Discuss the limiting values of  $\sigma$  and limitations of Poisson's ratio
5. Relation between shear strain, longitudinal and compression strain. Show that longitudinal strain + compression strain = shear strain by considering a cubical elastic body
6. Derive the relation between  $Y$ ,  $\eta$  and  $\sigma$  Derive the relation between  $K$ ,  $Y$  and  $\sigma$  & Derive the relation between  $K$ ,  $\eta$  and  $Y$  Virtual Lab on Young's Modulus Experiment.
7. Define bending moment. Derive the expression for bending moment in terms of moment of inertia. Mention the expression for bending moment for circular and rectangular cross sections. Describe a single cantilever and hence derive the expression for  $Y$
8. Twisting couple on cylindrical wire, explain torsional oscillations, derive the expression for couple per unit twist for a solid cylinder
9. Numerical problems on elastic constants, Poisson's ratio
10. Numerical problems on bending moment and torsional oscillations.

## Certificate Course on Physics of Engineering Materials

01/1/2022 - 08/1/2022

### REPORT

The certificate course on *Physics of Engineering Materials* was held from 1<sup>st</sup> to 8<sup>th</sup> January, 2022. The total duration of the course was 30 hours in which students were given insight of Elastic materials, Crystallography and Superconductivity. The relevance of these topics in the current world and their contribution as engineers in these fields were briefed. Inauguration of certificate was held on 1/1/2022, 9.30 am onwards.

Through the different sessions students were made to understand and recognize the elastic properties of materials for engineering applications. Students were explained the physics that underlines the behaviour exhibited by superconductors. Students comprehended the wide range of research and application in this field. Students obtained the knowledge on fundamentals of crystallography, symmetry, structural analysis and crystal structure determination.

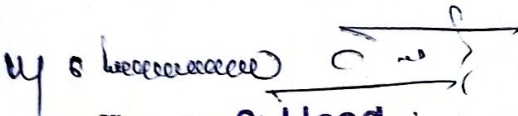

A total of 92 students participated in the course. Students were evaluated based on the 3 assignments and a final exam that was conducted. Certificates were awarded to students who cleared the cut off based on the criterion specified for course. A total of 85 completed the course successfully and received the certificate for the same. All 85 students were given completion certificate on 14<sup>th</sup> January 2022.

- ▶ A computer is a machine that stores pieces of information.
- ▶ A computer also moves, arranges, and controls that information (or data).
- ▶ A program is a detailed set of instructions that tells a computer what to do with that data.

## What is Python:

- Python is a widely used high-level, general-purpose, interpreted, dynamic programming language.
- Its design philosophy emphasizes code readability, and its syntax allows programmers to express concepts in fewer lines of code than possible in languages such as C++ or Java.
- Python supports multiple programming paradigms, including object-oriented, imperative and functional programming or procedural styles.
- It features a dynamic type system and automatic memory management and has a large and comprehensive standard library

### Advantages

- Easy-to-learn and use
- Improved productivity
- Interpreted language
- Open-source
- Easily portable
- Massive libraries
- Easy-to-integrate

### Disadvantages

- Low speed
- Inefficient memory consumption
- Weak in mobile devices
- Difficult to access database
- Prone to cause runtime errors

### **ETABS(Extended Three-dimensional Analysis of Building Systems)**

ETABS is a highly efficient analysis and design program developed especially for building systems. ETABS is developed by CSI America. It is loaded with an integrated system with an ability to handle the largest and most complex building models and configurations. The software has powerful CAD-like drawing tools with a graphical and object-based interface. It increases the productivity of structural engineers. It saves a significant amount of time and money over the general purpose programs. The leading structural engineering firms Wood & Grieve Engineers,

Somero Enterprises Inc, Ghafari Associates, LLC, The Library Corporation, Inc., Carey Group PLC, to mention few have extensively used this tool for design of various infrastructure related to interdisciplinary applications.

### **Course Objectives**

The course aims to offer comprehensive knowledge on the ETABS software and its applications. The course will help the candidates to acquire in-depth details about the different procedures and simplified analysis aspects of the design models. The certification converts a candidate into an expert that is ready to work in the civil structures analysis & design industry.
